

Datadog

Installation

- install the Agent on your Cassandra nodes

```
DD_API_KEY=0a7ab0cae3d67c7ab10a918db37020b6 bash -c "$(curl -L https://raw.githubusercontent.com/DataDog/datadog-agent/master/cmd/agent/install_script.sh)"
```

Configuration

```
sudo cp /etc/datadog-agent/conf.d/cassandra.d/conf.yaml.example /etc/datadog-agent/conf.d/cassandra.d/conf.yaml
```

Restart the agent

```
sudo service datadog-agent restart
```

Validation

```
sudo datadog-agent status | grep cassandra
```

```
cassandra
  instance_name : cassandra-localhost-7199
  message : Number of returned metrics is too high for instance: cassandra-localhost-7199. Please read http://docs.datadoghq.com/integrations/java/ or get in touch with Datadog Support for more details. Truncating to 350 metrics.
```
